

GroundPoint Engineering is a small consulting firm committed to empowering remote, independent professionals who value flexibility and freedom in getting their work done. We are offering an opportunity to work on a USGS funded Elevation Derived Hydrography project ([3DHP](#)) that includes training with and implementing of USGS [WBD](#) tools, with the additional potential to support GIS based dam failure impact assessments for both vulnerable populations and critical infrastructure.

GroundPoint offers both W2 wage positions for staff and part time opportunities for independent contractors. Compensation is based on a combination of experience and performance. Individuals must demonstrate capacity for independent problem solving, time management and working remotely. Those interested can contact:
